IPF 900XS Series Lights

Seattle, WA - Just released by ARB, the new IPF 900XS lights are designed for the entire spectrum of offroad users combining proven IPF reliability with advanced technology for extreme performance no matter what the conditions.

The 900XS incorporates numerous features making it an ideal choice for today's four wheeler. A key benefit is the light's ability to tolerate being fully submersed in water for limited periods at a time. This is achieved via the light incorporating a porous membrane breather on the reflector and unique sealing on the bulb and loom connectors.

The 900XS features a high performance H9 bulb that was developed specifically for high beam and driving light applications, which offers the highest luminance value of any light source in its class. At 65 watts it has a very low amp draw, yet outperforms bulbs twice its wattage. The H9 bulb is matched to an advanced heatproof resin reflector, which coupled with a high quality hardened glass lens, produces outstanding lighting performance. Constructed using a heavy gauge steel body and incorporating a multi directional mounting base, the 900XS suits the majority of ARB bull bars.

The lights are supplied as a pair, complete with wiring loom, relay and switch, and are available in either a spot beam or driving beam. The stylish design available with grill covers, and distinguishing modern metallic colors ensure these lights look great on the front of any vehicle.

Packed with features, the 900XS lights deliver stunning light output and maximum life expectancy regardless of the conditions. They are available from ARB distributors nationally.
