January 2019

**Description:**

ARB Air Systems E-Z Digital Deflator

**Part No.**

ARB510

**Barcode:**

9332018054678

**Price:**

List: \$65.00

**Availability Date:**

January 2019

## Product Specification

**Whether you're heading down to the beach or venturing into the thicket, the new E-Z Digital Deflator will be one of your most valuable recovery items to assist in the deflation of all tire sizes.**

Often deflating your tires while off-road can be a time consuming and taxing chore. However, ARB has a new solution to maximize tire traction in less time. Adding to our existing, ever-reliable analogue E-Z Deflator, ARB offers a new digital gauge to make deflation even easier. With accuracy of up to +/-1psi at 15-75psi and a large digital read out with a blue backlit display you will be set for tire deflation. The new deflator includes settings for multiple pressure readouts including; psi, bar, kpa and KgF, so you can rely on an accurate pressure reading.

Most four-wheel drivers understand the importance of running the correct tire pressures for different road conditions. This is why it's so important to carry an accurate air deflator in your vehicle. The ARB Air Systems E-Z Digital Deflator makes adjusting your vehicle's tire pressures a fast, accurate, and simple operation.

## Features & Benefits:

- Easy-to-read blue backlit display screen
- Large LCD digital readout
- Screw-on chuck suits all Schrader valves
- Battery indicator
- Multiple measurements available
- Rubber bump guard to protect against drops
- Updated larger carry pouch included
- High-quality brass components and crimps
- 250mm braided line
- Screw-on chuck for positive engagement
- Accuracy to +/- 1psi at 15-75psi
- Max supply pressure: 350psi, 2400kpa
- Up to 200hrs runtime on set of batteries (2 x AAA)
- Auto switch off
- Auto switch on

## Technical Specifications:

- Scale
  - 0-14 bar
  - 0-200 psi
  - 0-1400 kpa
  - 0-14 KgF
